

Attorney Docket No. 9778-3
Application No. 10/565,799
Filed: January 26, 2006
Page 2 of 6

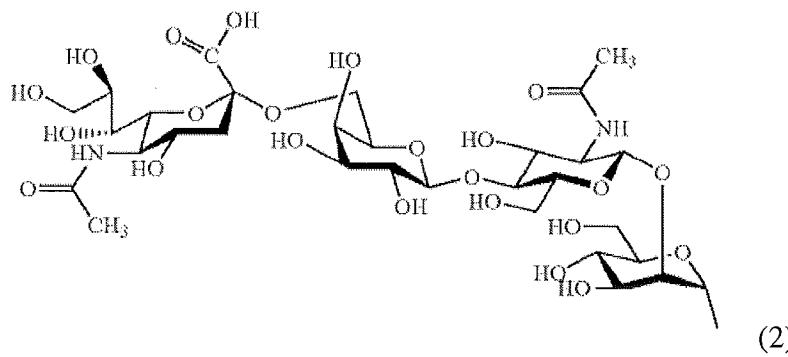

IN THE CLAIMS:

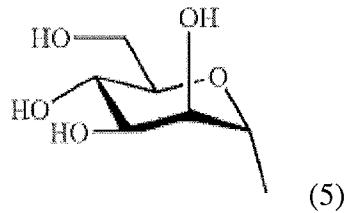

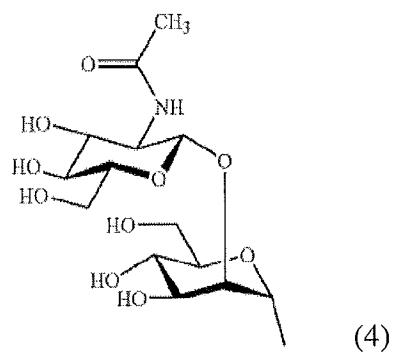

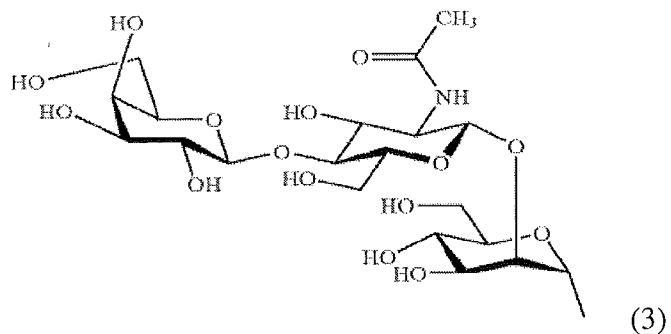

1-3. (Canceled).

4. (Previously Presented) A glycopeptide comprising an aminated complex-type oligosaccharide of the formula (1)

wherein R¹ is -NH-(CO)-CH₂X, X being a halogen atom, R² and R³ are a hydrogen atom or a group of the formulae (2) to (5) and may be the same or different, except that R² and R³ are not both hydrogen or the formula (5) at the same time and when one of R² and R³ is hydrogen, the other is not the formula (5),

wherein the glycopeptide has about 12 times higher resistance to Peptide-N Glycosidase F (PNGase F) than a glycopeptide comprising an asparagine-linked oligosaccharide, and the aminated complex-type oligosaccharide binds to a thiol group of a peptide by displacement of halogen X of NH-(CO)-CH₂X.

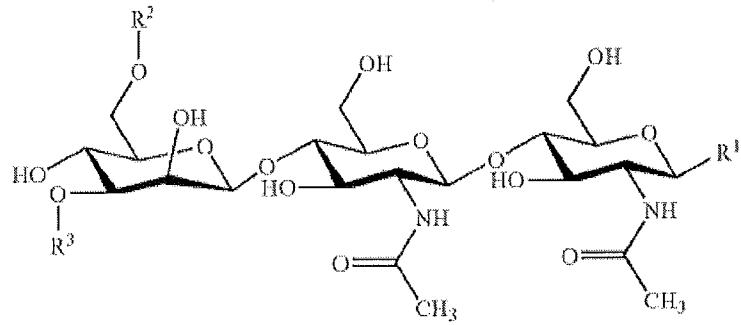

5. (Canceled).

6. (Original) A glycopeptide as defined in claim 4 wherein the glycopeptide is an antibody.

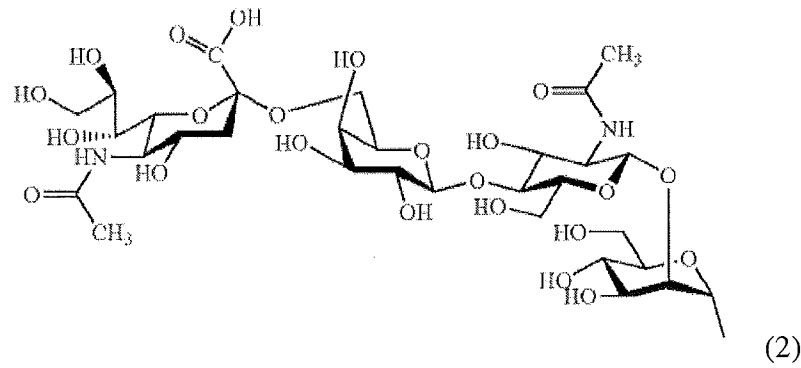

7. (Previously Presented) A process for preparing a uniform glycopeptide composition

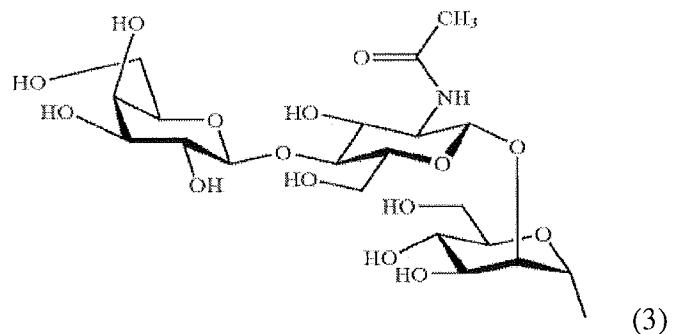

comprising steps of (a) and (b) that are performed at the same time,

(a) cleaving an asparagine-linked oligosaccharide of a glycopeptide from a peptide by Peptide-N Glycosidase F (PNGase F), wherein the resulting peptide has a thiol group, and
(b) bonding an aminated complex-type oligosaccharide of the formula (1)

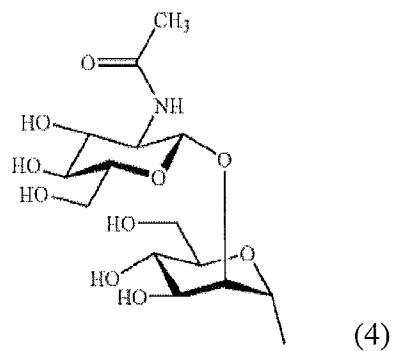

wherein R¹ is -NH-(CO)-CH₂X, X being a halogen atom, R² and R³ are a hydrogen atom or a group of the formulae (2) to (5) and may be the same or different, except that R² and R³ are not both hydrogen or the formula (5) at the same time and when one of R² and R³ is hydrogen, the other is not the formula (5),

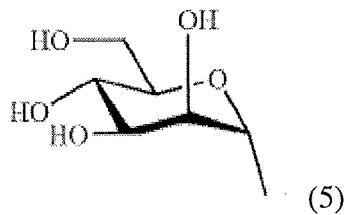

(3)

(4)

(5)

to the thiol group of the resulting peptide by displacement of halogen X of -NH-(CO)-CH₂X.

8. (Canceled).
